\*Absolute Ratings rate the level of a school's academic performance on achievement measures for the school year. For example, an "Average" rating for a school means students met the expected standard and progressed academically at the expected rate

\*\*Growth Ratings rate the academic progress of schools by comparing their scores from one year to the next year. Ratings also reflect reductions in achievement gaps between majority groups and historically underachieving groups of students as well as sustained high levels of school or district achievement.
